Professional Summary

Aspiring Junior Machine Learning Engineer and Entry-Level Data Analyst with hands-on experience in machine learning, data analytics, predictive modeling, and data visualization. Skilled in Python, SQL, Power BI, Tableau, Excel, Scikit-learn, and data preprocessing techniques. Experienced in building machine learning workflows, analyzing real-world datasets, developing dashboards, and communicating insights through academic projects and research. Author/co-author of 6 research publications in AI, machine learning, computer vision, network analysis, and edge computing.

Technical Skills

Programming Languages: Python, JavaScript, C, C++

Data Analysis & Statistics: Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA), Statistical Analysis, Hypothesis Testing, Data Validation

AI/ML & LLMs: Machine Learning, Deep Learning, Large Language Models (LLMs), LLM APIs, Feature Engineering, Model Training, Model Evaluation, Predictive Analytics

Libraries & Frameworks: Pandas, NumPy, Scikit-learn, TensorFlow, Matplotlib, Seaborn, OpenCV

Data Visualization & Reporting: Power BI, Tableau, Microsoft Excel, Dashboard Development, KPI Reporting, Data Storytelling

Databases: SQL, Joins, Aggregations, Subqueries, Data Extraction

Tools & Platforms: Git, GitHub, Jupyter Notebook, Flask, Streamlit, Salesforce

Education

St. Clair College — Windsor, Ontario, Canada

Sep 2024 – Apr 2026

Ontario College Graduate Certificate in Data Analytics for Business

SRM University — Vijayawada, India

Aug 2020 – Apr 2024

Bachelor of Technology (B.Tech) in Computer Science

Professional Experience

Salesforce Developer Intern — Smart Bridge, Hyderabad, India

Jul 2022 – Sep 2022

Customized Salesforce CRM workflows to automate business processes and reduce manual data entry effort.

Built interactive dashboards and automated reports to track KPIs, lead conversion, pipeline value, and customer engagement.

Performed data validation and quality checks on CRM records, improving reporting accuracy by resolving duplicate and inconsistent entries.

Collaborated with cross-functional teams to gather requirements and deliver scalable CRM solutions aligned with business needs.

Projects

AI-Based Traffic Accident Severity Prediction | Python, Scikit-learn, SMOTE

2026

Merged and cleaned three UK Department for Transport (DfT) STATS19 datasets containing over 60,000 road accident records.

Performed exploratory data analysis, feature engineering, data preprocessing, and SMOTE-based class imbalance handling.

Trained and evaluated multiple machine learning models to predict casualty severity using accuracy, precision, recall, and F1-score metrics.

Brain Tumor Detection Using Deep Learning | Python, TensorFlow, CNN, OpenCV

2024

Developed a CNN-based system to detect and classify brain tumors from MRI scan images.

Applied image preprocessing, normalization, augmentation, and feature extraction techniques to improve model performance.

Evaluated model performance using accuracy, precision, recall, F1-score, and confusion matrix metrics.

CogniPlus – A Semantic Document Explorer Python, LangChain, Gemini-Pro, Streamlit, NLP Developed an AI-powered document exploration platform enabling semantic search and knowledge retrieval from PDF documents. Built a Retrieval-Augmented Generation (RAG) pipeline using text extraction, embeddings, vector storage, and semantic search. Integrated Gemini-Pro and LangChain to provide intelligent question-answering through an interactive Streamlit interface.	2024
SepsisSense – ICU Sepsis Risk Prediction Python, Scikit-learn, Pandas Developed machine learning models to predict sepsis risk using ICU patient records and clinical data. Applied preprocessing, feature selection, and model evaluation techniques to improve predictive performance. Compared classification algorithms using precision, recall, F1-score, and ROC-AUC metrics.	2026
Rainfall Analytics Dashboard Power BI Designed an interactive Power BI dashboard to analyze rainfall trends, seasonal patterns, and precipitation anomalies. Performed time-series analysis and data transformation to identify long-term weather patterns and unusual rainfall events. Created KPI indicators, drill-through reports, and visualizations to support data-driven reporting and decision-making.	2025
Hand Gesture Recognition System Python, OpenCV, Computer Vision Developed a real-time hand gesture recognition system using computer vision and image processing techniques. Implemented feature extraction and gesture classification for intuitive human-computer interaction. Improved recognition accuracy through image preprocessing and model optimization.	2024

Publications

Author/co-author of 6 research publications in Artificial Intelligence, Machine Learning, Computer Vision, Network Analysis, Edge Computing, and Wireless Sensor Networks.

- Enhancing Image Crispness: A Detailed System for Versatile Optimization
- Network Analysis of Liver Diseases Associated Drug Interactions
- Multi Object Detection
- An Efficient Task Scheduling for Latency Sensitive Tasks in Edge–Cloud Computing Environment
- Community Detection and Centrality Measures in Alzheimer’s Disease Network Analysis
- Comparative Evaluation of Optimization Techniques for Industrial Wireless Sensor Network Hello Flood Attack Mitigation
